Machine Learning & Analytics

SUMMARY

Systems Analysis and Development student with hands-on experience in Data Science applied to real-world problems. I am skilled in Python, SQL, Exploratory Data Analysis, Machine Learning, and data pipeline automation. Actively involved in projects covering data collection, processing, analysis, and visualization.

HABILIDADES

Languages & Tools: Python, SQL, Git/GitHub, FastAPI, Docker, Power BI, Databricks.

Data Science & Machine Learning: Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch, EDA, feature engineering, supervised learning models, model validation.

Soft skills: Analytical thinking, communication, curiosity, organization, teamwork, continuous learning.

Languages: English ([C2 – EFSET Certified](#)). Portuguese (Native).

PROJETOS

Horus AI — Anomaly Detection in Streaming Data

- Artificial Intelligence system designed to process Rede Globo live streams in real time, applying computer vision and data pipelines to detect and report transmission failures according to Globo's technical standards.
- Feature engineering, metric design, development and application of Machine Learning models for automated anomaly detection.

OpenFinance — Real-Time Financial News Analysis

- Monitoring system that aggregates financial news from 7 Brazilian sources (including InfoMoney, G1, Poder360, BBC Brasil), processing approximately 70 news articles every 2 minutes.
- NLP-based news classification, entity extraction, impact analysis, and geographic attribution.

EDUCATION

Systems Analysis and Development: FICR (2024 – 2026)

- **Relevant coursework:** Data Structures, Applied Databases, Artificial Intelligence, Data Science, Technological Residency, Extension Projects, Mathematical Logic, Algorithms.

EXPERIENCE

Technological Residency Program: Porto Digital (Feb 2024 to Present)

- In partnership with the university and Globo, it contributed to the development of an AI system for analyzing and reporting incidents in daily broadcast transmissions, involving software development, Machine Learning, and data collection processes.
